1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.
4. **REMINDER**

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FI 2003/000571

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	<u>1-18</u>	YES
	Claims		NO
Inventive step (IS)	Claims	<u>1-18</u>	YES
	Claims		NO
Industrial applicability (IA)	Claims	<u>1-18</u>	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

Document being considered to be of particular relevance:

D1 GB 2377008

The invention relates to a cooling element and a method of producing the same. A copper housing that is preferably made in one single piece is connected to refractory lining elements in a manner that the lining elements are movable in the vertical direction with respect to the housing.

D1 (figure 3) relates to a cooling panel with refractory material (9) that is attached to copper pipes (2) and fins (4) and a backing plate (2). However, it does not disclose lining elements as stated in the claims of the invention, but a monolithic lining. Therefore, D1 has been reconsidered not to be of particular relevance.

None of the cited documents reveal cooling elements that are movable in the vertical direction with respect to the housing. Consequently, the invention as defined by claims 1 and 17 is novel.

The stated difference implies improvements in respect of preventing damage caused by thermal expansion and achieving good contact between the fireproof lining and the cooling element housing. Consequently, the invention as defined by claims 1-18 is considered to involve an inventive step. The invention is also considered to fulfil the criteria of industrial applicability.
